

# SQS Rapid Deployment Package for SAP core ERP

Packs of test cases for SAP test automation

Since its inception in 1982, SQS has developed into a market leader for independent services in all aspects of software quality. For the last 15 years SQS group has been delivering testing services for customers with SAP and continues to use the experience and specialisation resulting from its wide-ranging engagements to deliver the best results for its customers.

Since 2013 SQS' SAP Practice has focused on increasing capabilities globally to support many SAP solutions, e.g. SAP ERP, which includes modules such as Finance, Controlling, Materials Management, Sales & Distributions, Production Planning etc., SAP CRM, SAP SCM (supply chain management) and industry-specific solutions such as IS-Retails, IS-Utilities, IS-Auto, IS-Pharma etc. More importantly, the practice is also focusing on building reusable assets in terms of manual and automated test cases that can be deployed faster and more easily in customers' SAP and testing tool environments.

SQS' SAP Practice has experience of testing hundreds of end-to-end scenarios/business processes and has utilised this experience for a number of its global SAP customers through its 600 Test Consultants involved in SAP testing services.

SQS is a strong advocate of **process**-based testing and associated **risk**-based testing models to enable businesses to deliver efficient and cost-effective quality management. It is therefore offering an SAP Rapid Deployment Package (SAP RDP) for its SAP customers worldwide.

Test cases are identified on the basis of SAP's key functionality in five of its core ERP modules – FI (Finance), CO (Controlling or Management Accounting), MM (Materials Management), PP (Production Planning) and SD (Sales & Distribution) for SAP ECC v6.x. Customers choose a pack of 100 test cases from a pool of hundreds of test cases covering standard functionality, identified on the basis of risk-based strategies. This allows the flexibility to choose test cases that are more relevant to their SAP configurations and for their most critical functionality. Customers are able to choose additional test cases in packs of 100.

The SAP RDP comes in packs comprising of 100 automated test cases, the automation framework and sample test data. It is available in two options: 1) using HP tools, e.g. HP ALM and UFT; 2) using eCATT – SAP's Test Automation tool available in Solution Manager. SQS experts will be able to discuss these options with the customer to determine their suitability and appropriateness.

## Key benefits that SQS offers to customers

- Accelerated test automation, easy to choose the scope and faster to deploy
- Proven test coverage, risk-based testing considerations, option to choose & select
- Flexible pricing
- Regression testing in 'global delivery' model
- Extensive reduction in turnaround time

## The right partner for your success

SQS' test and quality management for SAP® software

- Simplify your implementation, upgrade & ALM
- Reduce risk of failure & delays
- Visualise your testing landscape
- Ensure quality delivery
- Run SAP® with confidence

As shown in below pie chart, nearly 85% of test cases are catered for high and medium risks, ensuring that organisation's critical business processes are tested in most efficient and affordable manner.
