

Test & Quality Management for SAP® Projects

SQS is the right partner to realise SAP® benefits quickly and successfully

How do I lower TCO?

What are the risk areas to be tested?

What to test in my huge SAP® solution?

SAP testing by SQS

What is the impact of inefficient testing?

Are my key critical business processes zero error tolerant?

How can I reduce time to market?

The right partner for your success

SQS' test and quality management for SAP® software:

- Simplify your implementation, upgrade and ALM
- Reduce risk of failure and delays
- Visualise your testing landscape
- Ensure quality delivery
- Run SAP® with confidence

Your benefits with SQS at a glance:

- Identify and ensure near zero errors in risk areas
- Extensive testing experience ensures quality
- Expertise in automation of regression testing
- Analysis, consultancy, design, build and execution of testing from a single source
- 30+ years testing experience, 7,000+ successful projects
- Knowledge asset management and re-usable accelerators
- Technical capabilities and state of the art testing tools

All these benefits at no additional cost, leading to savings on current project execution costs.

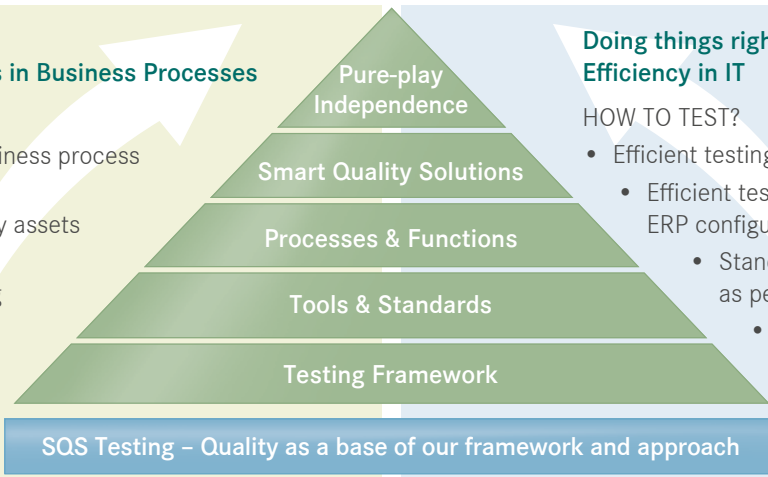

“Quality with Quality” delivered by SQS

In addition to technology driven change, the business side also generates a need for regular test runs. SQS addresses these needs with the help of an extensive library of test cases as accelerators for specific SAP® solutions such as SAP® FI, CO, MM, SD, PM, PP, QM, CS, PS, HCM and IS-U etc, which are suitable for use at short notice. Our consultants are ISTQB® certified with many being SAP® certified or having domain experience in one or more SAP® modules. These strengths make SQS stand out as an expert in its field with scalable onsite (client location), near-shore and offshore test centres, turning plans into effective and complete solutions.

Doing right things – Established Effectiveness in Business Processes

WHAT TO TEST?

- Scenario based and business process based testing
