

# SQS Programme and Project Management (PPM)

Programme and Project Management solutions that drive strategic business priorities with a Quality focus.

The current climate of digital transformation affects us all. Whether triggered by legislation or market forces, the organisations who successfully manage this change are the ones left standing: legacy is no longer a requirement to compete at the top level.

Today, the most notable requirement to compete is speed. Speed to market. Speed to production. Speed to embrace technology. Speed to service the customer. Speed to demonstrate compliance. And amidst this constant race over the line, quality is more essential than ever. Because you can't afford to fail.

We are your end to end quality consultancy partner; we add quality assurance to your process project management as a layer beneath your technological transformation. We can help you project manage the challenges of evolving technological requirements, multiple delivery partners, compressed timescales and continuous integration. And we mitigate risk at every step.

**“Everything we do is about managing project risk.”**

## What can we do for you?

SQS Programme and Project Management services enable businesses to optimise the delivery of programmes & projects by ensuring they are aligned with the organisation's overall strategy; hence enabling them to monitor & realise real world business benefits.

We represent our clients in project delivery and provide them with project management solutions that best fit their needs. Through recognising the need to maximise the use of client assets, underpinned with industry best practice (PMBOK) our solutions are tailored for each client.

Our Programme and Project Management Solutions focus on:

- **Quality** – As an extension of our QA services we focus on Quality across the entire SDLC. Our framework is built to ensure Quality measures are in place to drive delivery efficiency and reduce costs.
- **Benefits Realisation** – Our framework is a central element of SQS programme and project management and ensures that potential benefits and the expected ROI are clearly defined, aligned to strategic priorities and that projects are governed with a benefits focus.

- **Client Strategy** – Our Project Governance model focuses on the development and delivery of client strategic priorities.

## SQS PPM Approach

SQS Programme and Project Management is based on quality planning and scope governance with a major focus on three themes, **Risk, Communication, Budget & Resources**. The focus on these themes provides a clear path to the main objectives of SQS PPM, which are **Delivery, Overall Quality and Benefits Realisation**.

## What services do we offer?

Through experienced Programme, Project and Change Management Consultants, SQS provides direction and control across both 'Strategic' and 'Delivery' services.

### PPM Strategic Consulting

- **PPM Maturity Health Check**  
Using the IT-CMF framework to assess client maturity we measure, baseline, and provide recommendations for all PPM capabilities.
- **Portfolio & Strategic Development**  
Review and assess organisation's PPM strategic priorities to develop best fit solutions while making best use of client assets to ensure early adoption and solution success.

- **Benefits Realisation**  
Implement Benefits Realisation using the SQS framework to ensure portfolios or programmes are delivering proposed returns and are supporting strategic business goals.
- **PMO Governance**  
Through reviewing and assessing an organisation's PMO in line with PMBOK we develop governance structures, which make best use of client assets to assist early adoption and success.
- **PPM & Change Coaching**  
Provide clients with thought leadership, coaching and best practices to effectively implement and embed changes required to address market developments.

### PPM Delivery Services

- **Programme Delivery**
  - Develop programme and project plans as per best practices.
  - Deliver to plan using a cost effective approach to ensure resources are spread efficiently during project lifecycle.
  - Focus on Benefits Realisation to ensure programme and individual project goals are met.
- **Vendor Governance**
  - Represent clients in the quality assurance of project delivery across the entire SDLC using the SQS Quality Framework.
  - Implement Quality Gates to ensure vendors are delivering against agreed plans/contracts/KPIs.
- **Tender Management**  
Define requirements, draft tenders and guide clients through EU procurement processes to ensure timely and efficient delivery of tendered services.
- **Continuous Improvement**  
Define opportunities for continuous improvement and drive changes for increased efficiency and effectiveness.
